Good :)

Great Organization! It is very easy to read :)

Controller

Heating Chamber

This is not the name of something you can make or buy. Change the name to something like Terminal Block or Power Strip

Key

- External Power
- 110V Power
- 5V Power
- Wired Signal

Good :)

The signal for this does not come from the relay. It splits off from the signal going to the relay. The board schematic shows this

Introduction:
This diagram shows the relationship between the different blocks that appear in the Feature List. The dashed line represents a device boundary. An interface will need to be defined for any signal that crosses the boundary. Blocks that touch the boundary are accessible from the outside of the device.

Good :)
